

NOUR HANY

Computer Science Student | Backend & Full-Stack Development

nourhanyhanafy2005@gmail.com | 01115897600 | Giza, Egypt | linkedin.com/in/noorrhany22

OBJECTIVE

Third-year Computer Science student at Ain Shams University with a strong foundation in Python and object-oriented design, focused on backend and full-stack development. Comfortable working across the stack, from data handling to application logic, with hands-on experience building structured, end-to-end projects. Seeking an internship or junior software engineering role to apply problem-solving skills, sharpened through competitive programming, to real-world backend systems.

EDUCATION

Bachelor of Computer and Information Science

Expected 2028

Ain Shams University — Cairo, Egypt | Third-Year Student

- Relevant coursework: Data Structures, Algorithms, Object-Oriented Programming, Artificial Intelligence, Embedded Systems
- Active member of technical and media student activities, demonstrating initiative beyond academics.

EXPERIENCE

Coding Instructor — iSchool (DEMI & DECI Initiatives, MCIT)

Summer 2025

- Taught Python programming fundamentals to students on a part-time basis, as part of the DEMI and DECI initiatives under the supervision of the Ministry of Communications and Information Technology (MCIT).

UNIVERSITY ACTIVITIES

Member — Problem Solving & Competitive Programming | ACM Student Chapter

2024 – 2026

- Trained in algorithms and data structures through coding challenges and contest preparation alongside peers, building consistent problem-solving practice.

PR & Media Member | APPLAI Student Activity

2024 – 2026

- Managed media content and communications to promote events and boost team visibility across platforms.

PROJECTS

Contact Management System | C++ | OOP

- Built a modular contact management application applying OOP principles (encapsulation, classes, abstraction) with full add, edit, delete, and search functionality.

Smart Car — Line Follower & Obstacle Avoidance | Arduino Uno | Embedded C

- Programmed an autonomous smart car with real-time sensor integration for line-following and obstacle avoidance using embedded C on Arduino Uno.

Titanic Survival Prediction | Python | Pandas | Scikit-learn | ML

- Built an end-to-end machine learning pipeline covering data preprocessing, feature engineering, and multi-model evaluation to predict passenger survival.

SKILLS

- Programming Languages:** Python, Java, C++
- Backend & Core CS:** Object-Oriented Programming, Data Structures & Algorithms
- AI / Machine Learning:** Data Preprocessing, Model Training & Evaluation, Feature Engineering
- Data Analysis:** Pandas, Dataset Exploration, Statistical Analysis

COURSES & CERTIFICATIONS

- Mahara-Tech — Digital skills training platform, Ministry of Communications and Information Technology (MCIT)

LANGUAGES

Arabic — Native English — Fluent
